

THERMASHIELD™

THERMASHIELD™ is a superior thermal protection fabric constructed of spunbonded polypropylene with hydrophilic treatment for light, water and air permeability. **THERMASHIELD™** is used in greenhouses and similar structures, for plant, crop and seedling thermal protection and insulation. It is lightweight, easy to install, economical, non fray, non rot, will sew or ultrasonic/heat weld and is UV stabilised.

THERMASHIELD™ maintains temperatures in covered areas up to five degrees below ambient day temperatures and up to five degrees above night time temperatures. It slows down the rate of loss of heat and allows a light/medium frost protection. With its high permeability, this gives an excellent result with little condensation forming.

THERMASHIELD™ is available in White.

PRODUCT	COLOUR	ROLL WIDTH	ROLL LENGTH
50gsm	White	3.15m	100m

SPECIFICATION

Construction	Spun bonded polypropylene
Nominal Shade	45-50% (+/-)
Weight	50gsm or 17 kg per roll
UV Stabilised
