

SOLARSHIELD® Hortcover

SOLARSHIELD® Hortcover is a reinforced greenhouse film. The reinforced cover consists of thin strips of clear plastic, woven together to make a sheet, similar to a woven weed matting (but clear). This resultant sheet is then laminated with a thin layer of plastic on each side. In the case of a white cover, one of the laminated layers is coloured white.

The high strength and tear resistance comes from the strength of the woven inner scrim. Unlike extruded covers, the material can be sewn into fitted covers and have pockets and eyelets etc fitted.

It has an amazing **5 Year UV warranty**.

COLOURS	ROLL WIDTH	ROLL LENGTH
Natural	2.05m	50m

SPECIFICATION	
Construction	HDPE
Weight	180gsm
Light Transmission	Natural - 87.9% (approx)
Breaking Force	730-928 N/50mm
